VOICE PHISHING SIMULATION

AI Voice Phishing

A live AI caller that phones every employee in your own words, listens, answers and stops the moment it is asked.

Callstrike's AI caller places real phone calls to your employees from a local number, holds a natural conversation in their language and records who shared and who refused. Training follows the call, built from the employee's own transcript.

01

At a glance

7
languages, with accents matched to each employee's country

40+
countries with local caller numbers

0 to 100
believability score on every call

Every plan
consent on record before any call

02 HOW IT WORKS

From a scenario to a trained employee

1 **Choose or write the scenario**

Pick from the Official library, where each scenario's difficulty is measured and shown as Obvious, Realistic or Convincing, or answer three questions and get a custom scenario drafted in your own words.

2 **Test it yourself**

Play the employee in a browser test call before launch. The caller waits for you to speak first, exactly as it will on a real call.

3 **Set the calling plan**

Spread calls over weeks inside a daily calling window, choose a Recommended or Aggressive pace, and use one local caller number per audience country.

4 **Read and follow up**

Each call is recorded and transcribed in the scenario's language. Employees who shared are enrolled in remediation training, and each outcome can send its own follow-up email.

03

WHAT YOU SEE

Results that say what happened on each call

Shared or refused

Each call's outcome is recorded, with no clear result, no answer, voicemail and busy kept apart so they never count as a pass.

Believability

A 0 to 100 score per call shows how convinced the employee was, next to its duration and outcome.

Dashboard and risk

Results by department and a per-employee risk score whose every factor is named.

A fair second round

Nobody is redialled automatically. Pick the employees not reached and launch a new round for them.

04

SAFEGUARDS

Training, never an attack

Consent on record

A campaign calls only employees with consent on record. Consent Management is part of every plan.

Stops when asked

The caller ends the call when an employee asks it to stop, hang up or end the call, or says the workspace's stop word.

Content policy

Every scenario is checked against a content policy before it is saved. Threats, extortion and content built to distress are refused.

Disclosure

A step in the wizard sets how employees learn it was a simulation: in-call education, a follow-up email, or both. An EU AI Act notice turns on automatically for employees in the EU.

See it on a call with your own team. Book a walkthrough at www.callstrike.ai
