DEEPFAKE SIMULATION

Live Deepfake Video Calls

Your operator joins a real video call wearing a familiar face and voice, so leaders and teams feel how convincing a deepfake is before an attacker does.

Your operator, from your security team, red team or MSSP, joins a live video call with a real-time face swap and a cloned voice, on the meeting and messaging platforms your company already uses, or on a projector in the room. At the moment of your choosing, they reveal their real face and voice.

01

At a glance

Live
face swap and cloned voice on a real call

10
video and messaging platforms, plus the room itself

1 photo
of the person the operator appears as

0 installs
on the operator's computer

02 WHERE IT RUNS

The platforms your employees already trust

Choose the delivery channel in the first step of the wizard: a meeting platform, a messaging app's call, or Presentation Mode on your own screen for a boardroom or an event, with no meeting created.

Zoom · Teams · Google Meet · Webex · Slack · Telegram · Signal · WhatsApp

GoTo Meeting is supported too. On WhatsApp, live voice and video calls from WhatsApp Web are limited for now.

03 HOW IT WORKS

From a photo to a reveal

1 **Set the scenario**
Pick the use case, name the person impersonated and their role, and set the department and the objective.

2 **Build the persona**
Upload one photo of the person, and choose a cloned voice, a recording or the operator's own.

3 **Join the call**

The meeting app runs in a cloud session with a virtual camera, and the face swap runs on a cloud GPU in the session's region. Nothing is installed on the operator's computer.

4 **Reveal and rate**

Reveal the operator's real face and voice mid-call, then rate the session highly, moderately or not susceptible, with the outcome and an observation.

04 SAFEGUARDS

Disclosed in the call itself

A video call has no attendee list to email afterwards, so the disclosure happens inside the call.

AI label on the video

The operator can burn an AI-manipulated video label into the frames the room sees, as a caption or a caption in a box.

Live reveal

Drop the persona at any moment: the operator's real face whole, split or side by side, and their real voice.

Consent first

Run sessions only with employees and leaders who have agreed to take part, and only in the faces and voices of people who have agreed to lend them.

Recorded for the debrief

The operator can record the session, stored per workspace, to debrief the room afterwards.

See it on a call with your own team. Book a walkthrough at www.callstrike.ai
